

Effective Instruction and the Science of Learning

Drawing on the findings of cognitive science, [Goodwin, Gibson, Lewis, and Rouleau \(2018\)](#) outline three distinct mental operations that must take place for deep learning to occur:

Attention

Making the initial connection

Concentration

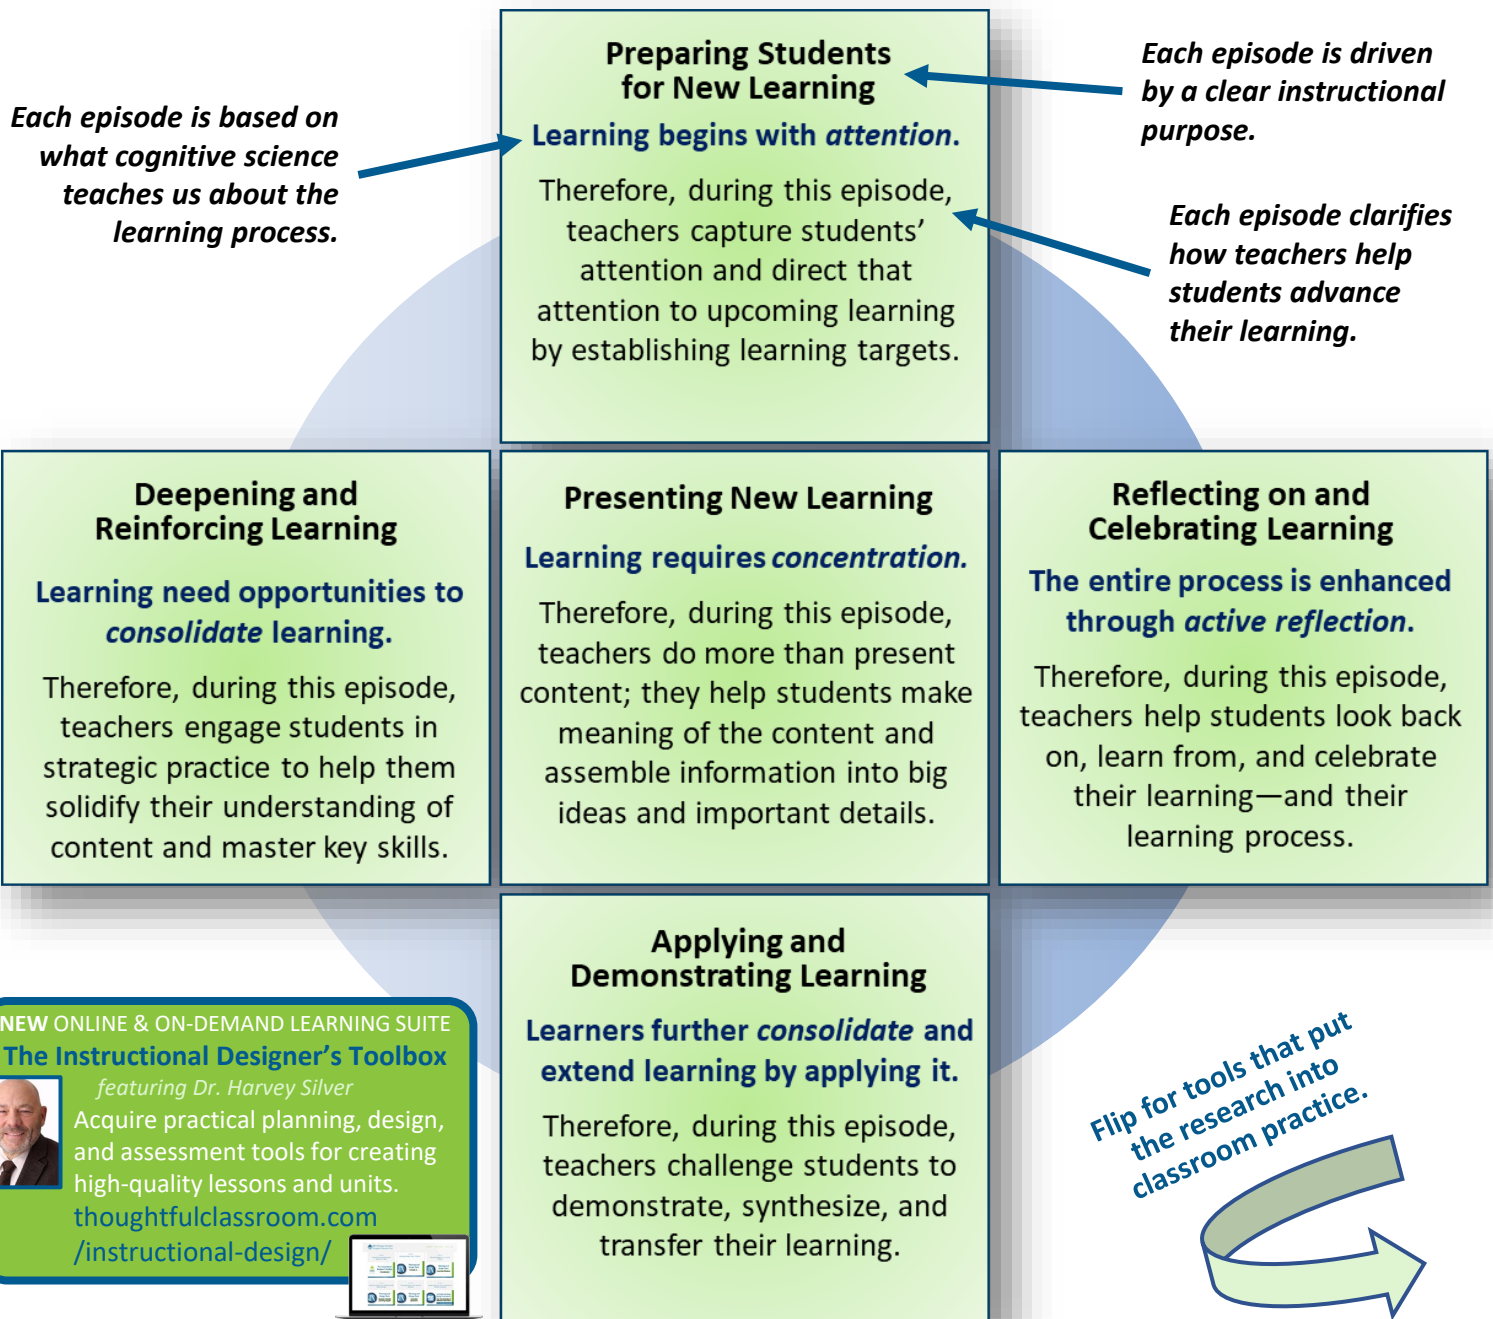

Working with and actively processing learning

Consolidation

Practicing, elaborating, and making learning personally meaningful

The **Five Episodes of Effective Instruction** makes it easy for teachers to design and deliver instruction based on the science of learning. It also synthesizes a wide body of research on instructional design, derived from the most highly regarded instructional frameworks ([Hunter, 1984](#); [Wiggins & McTighe, 2005](#); [Marzano, 2007](#); [Dean, Hubbell, Pitler, & Stone, 2012](#)).

TOOLS to Put Research into Practice

Each episode is rooted in research on learning and principles of instructional design. More important, we help teachers answer the question, “How do I turn the research into practice?” by providing a set of classroom-ready instructional **TOOLS** that make it easy to put the research to work.
